

Notes from Youtube videos

Video: [A conversation with NVIDIA's Jensen Huang](#)

- AI is not going to replace any jobs but all of us needs to use AI in our jobs. If we don't use AI in our jobs then our jobs will be take over by people who uses AI.
 - I found this interesting and motivating to start using AI agents. Similar point came up in other context, but that did not motivate me much but the way he put that point in this video made more impact on me. Again this makes me realize the concept of effective communication.

Video: [Googles New AI Glasses Are The Future Of AI \(Android XR Explained\)](#)

- XR glasses are joint project of Google, Samsung, and Adobe.
- These glasses are integrated with Gemini 2.0 and all android supported apps like Maps, Youtube etc.
- The things they showed in the video that they can do with these glasses is pretty great. You can just look at the place and ask for explanation and it is going to explain. You can ask questions about your chats, can reply by just talking with AI. You can ask for directions and see them in glasses.
- I think we need to just wait and try these things to see in action, because I am not sure whether it can handle complex situations or not. I am pretty sure that it can only handle very basic and straight instructions because of my experience with copilot and Windsurf coding AI tools.
