Notes from Youtube videos

Video: A Conversation with Nvidia's jensen Huang with stripe CEO

- AI is not going to replace any jobs but all of us needs to use AI in our jobs. If we don't use AI in our jobs then our jobs will be take over by people who uses AI.
  - I found this interesting and motivating to start using AI agents. Similar point came up in other context, but that did not motivate me much but the way he put that point in this video made more impact on me. Again this makes me realize the concept of effective communication.
